

# **Installing the KORG USB-MIDI Driver for Mac OS X**

*\* This driver is for Mac OS X 10.3.9 or later.*

*\* The KORG USB-MIDI devices in the Audio MIDI Setup application that were created by the KORG USB-MIDI Driver older than 1.0.3 will be removed automatically.*

1. Double-click the "KORG USB-MIDI Driver.pkg" which is found in the "KORG\_USB-MIDI\_Driver\_1.0.7\_For\_Mac" folder once you extract the contents from the Zip file.
2. Depending on the version of your operating system, a verification dialog box may appear at this point. If so, enter your password and click [OK]. When the installer starts up, the screen shown below will appear. Click [Continue].
3. "Important information" will appear. Read the contents, and click [Continue].
4. The "License Agreement" will appear. Carefully read the contents, and click [Continue]. A dialog box will ask you whether you accept the terms of the license agreement. If you accept, click [Accept].
5. A screen in which you can specify the "Installation Destination" will appear. Choose the installation destination, and click [Continue].
6. The "Easy Installation" dialog box will appear. Click [Install].
7. Depending on the version of your operating system, a verification dialog box may appear at this point. If so, enter your password and click [OK].
8. When the installation has been completed, click [Close] to exit the installer.
9. Begin with the KORG USB-MIDI device turned off. Using a USB cable, connect the KORG USB-MIDI device to your computer, and then turn it on.
